NEW DETAILS ON ATTACHING MEP TO HOLLOWCORE

RESEARCH NOTE 1034 NOW AVAILABLE

Spancrete Hollowcore plank provides a fast and cost effective floor system for many building applications. We are often asked about fastening MEP, sprinkler pipes and other equipment to the underside of hollowcore plank. The good news is that hollowcore is easy to work with and readily accepts many types of fastening systems.

[Click here to read RESEARCH NOTE 1034 for the latest details on how to handle this situation.](#)

June already, where has the year gone!

Time equals money...and in today's construction world, financing is incredibly hard to come by, so when projects start coming to life, they move at the speed of light towards completion. That is where PRECAST comes in as the perfect building solution. From design to erection, no other building solution is a better, more cost effective fit.

If you need assistance in design or engineering, Florida Precast Industries is your partner. We offer the highest quality precast solutions and remarkable delivery schedules. We are here to help! We pride ourselves on being the #1 hollowcore producer in Florida with a reputation for the best quality and service in the industry.

Call us today to jumpstart your next project!!

Kristin Szymczak
General Manager

Everyone Asks, WHY PRECAST?

The durability of precast, prestressed concrete components equals buildings that last longer and look better over the years. Low maintenance costs and insurance premiums, coupled with greater occupant satisfaction and higher resale values, are unmatched benefits of building with precast versus any other building system.

Precast concrete components reduce energy consumption in several ways: precast construction allows minimal air infiltration, thermal mass delays internal temperature changes and reduces peak heating and cooling loads.

Precast building systems reduce vibration, decrease noise transmissions, and create a safer environment. Occupants can enjoy the inherent quiet and comfort that precast concrete provides. In fact, precast concrete buildings typically have higher occupancy rates, greater tenant satisfaction, better lease rates and

outstanding resale values.

One of the most remarkable competitive advantages of precast concrete is its performance on life safety issues. Precast components and precast structural systems have demonstrated added value in fire safety, wind, flood, earthquake and noise transmission and general occupant comfort.

Please take a moment to consider the precast option and how Florida Precast Industries can deliver Quality, Service and Dependability to your project.
